iScan 2 plus

 PROVEN QUALITY
 A HIGHER STANDARD

iScan 2 plus

More of what you value!

Improved through the experience of thousands of users.
Because very good can be even better.

THE IDEAL CONFIGURATION FOR YOUR PRACTICE

iScan 2 plus is ideally suited for:

- reproductive system diagnostics
- assessment of corpus luteum blood flow
- pregnancy confirmation and monitoring
- assessment of fetal viability and sex determination
- lung examination
- gastrointestinal diagnostics
- assessment of the animal's body condition

CONFIDENT DIAGNOSIS USING DOPPLER

Color Doppler mode allows precise monitoring of pregnancy development and assessment of fetal condition.

By assessing corpus luteum activity, a resynchronization program can be implemented as early as 20 days after insemination. This makes it possible to significantly reduce the use of hormones in the herd and shorten the interpregnancy interval.

2-month pregnancy with Doppler

DURABILITY AND FUNCTIONALITY IN EVERY DETAIL

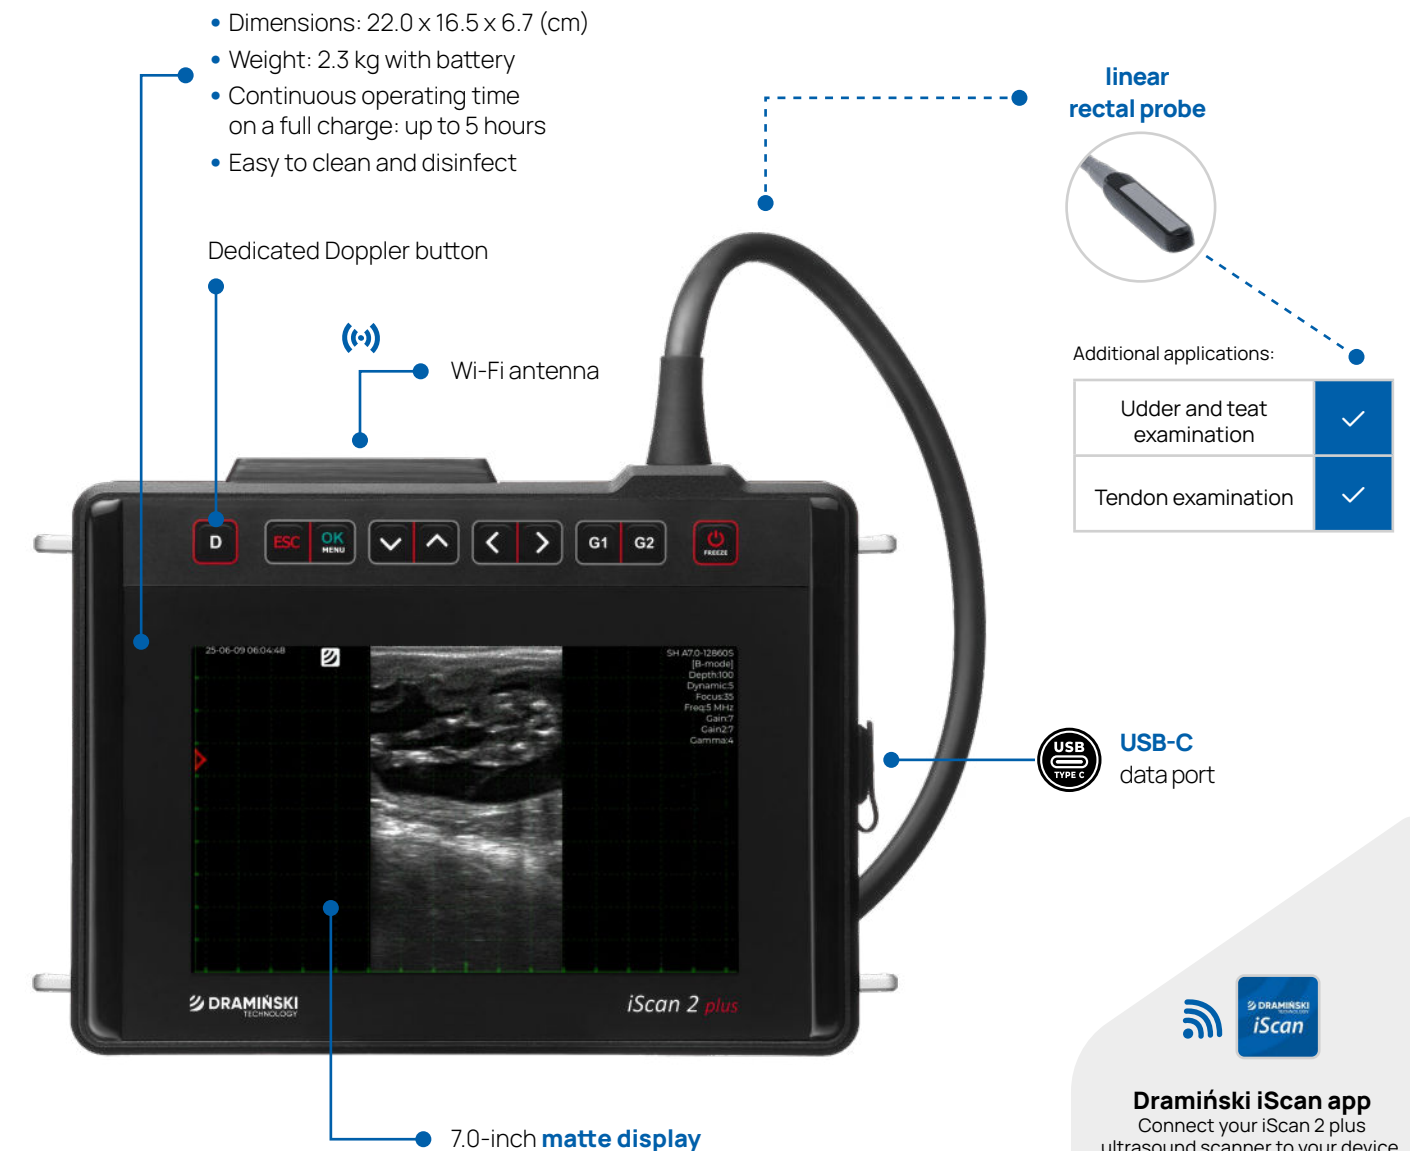

The hard, **matte display** eliminates reflections and ensures excellent visibility even in full sunlight, while in combination with the new image processing it guarantees even clearer visualization of structures.

The improved keyboard, with a dedicated button for activating Doppler mode, enables quick operation without taking your eyes off the image.

The unit retains its high protection rating, ensuring resistance to dust, moisture and intensive use in the field.

COMPLETE FREEDOM OF IMAGE TRANSMISSION

The built-in Wi-Fi module enables wireless, real-time image transmission to tablets, smartphones and **iLens AR goggles**, allowing examinations to be conveniently monitored from a safe distance.

THE SET INCLUDES:

- **iScan 2 plus** portable ultrasound scanner with linear rectal probe
- Battery
- Battery charger
- Neck carrying straps
- User manual
- Transport case
